Universitat de Lleida

PRESENTATION

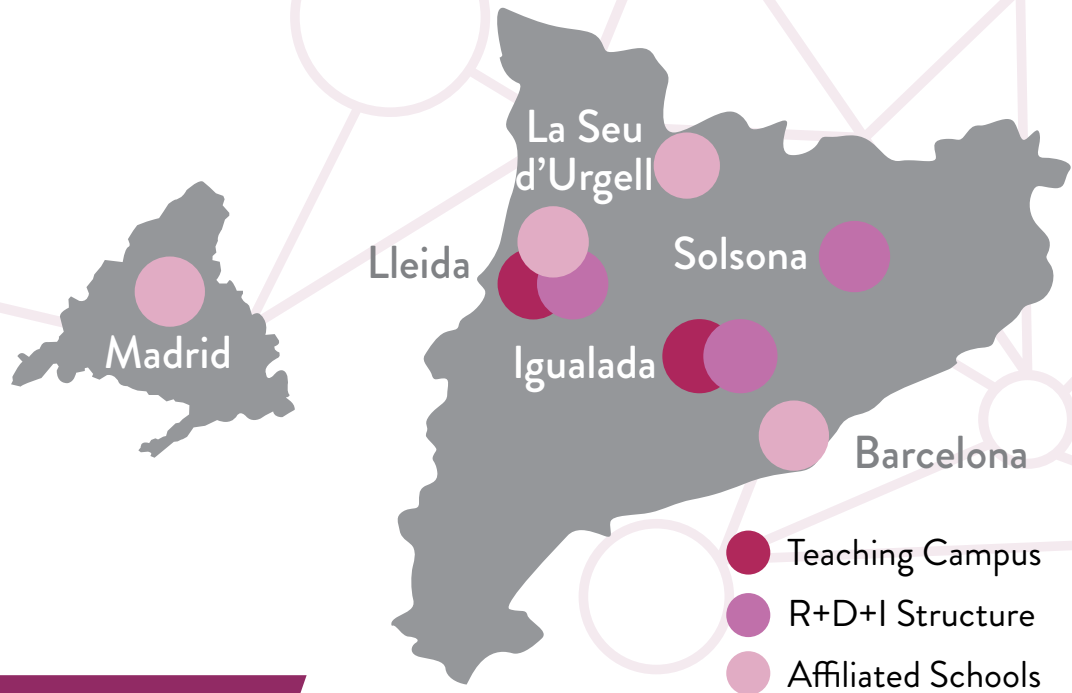

The University of Lleida is a Catalan public university with a universal vocation which works in the service of society with three main goals. The first is higher education, which provides graduates with human and professional values and adds value to the society in which they work. The second, which is fundamental, is the production of knowledge through research and its transfer to society, which converts it into well-being and progress. Finally, there is social commitment, which means working for justice and equal opportunities for everyone, the sustainability of the production systems and livelihood of the population and cooperation as an instrument to meet these goals here and everywhere. The aim of this document is to present the main goals and milestones achieved in these three fundamental pillars of university activity.

Did you know that...?

The UdL community would fill Paris Square at the Brandenburg Gate in Berlin?

Universitat de Lleida

STUDIES OFFERED BY THE UNIVERSITY OF LLEIDA

Teaching is the fundamental activity that allows the university to be able to fulfil its mission: to train professionals and citizens not just to be good professionals but also to enable them to acquire ethical values and to have a commitment to society. The UdL offers a flexible teaching and education model characterized by promoting dual training, the adoption of innovative teaching methodologies, personalization and proximity to students, with a strong interconnection between teaching and research and a lifelong learning catalogue geared toward demand and vocational retraining.

Bachelor's degrees, master's degrees, doctoral degrees and continuing education are part of the higher education offered at the university to improve professional competencies and contribute to the economic and social development of its environment.

Over the last five years, the University of Lleida has increased the number of students enrolled, reaching a figure of over 10,000 students taking official qualifications and more than 2,000 in continuing education.

RESEARCH +DEVELOPMENT +INNOVATION

The generation of knowledge — and its extension to society to improve the living conditions of people — is one of the university's missions and is reflected in the actions promoted in this sphere of activity. The University of Lleida is committed to training top researchers, and to attracting and retaining research talent. It moreover aims to capture research and transfer projects to increase its potential to generate more and better scientific results and exploit them. This creates a suitable environment for the university to be in a better position in the Catalan and Spanish research and transfer system, as well as internationally, especially in the areas of agri-food, health, technology and sustainability, and social and territorial development, which are the UdL's specialist areas.

In 2022, there has been a significant increase in the attraction of economic resources, mainly derived from the increase in the number of projects obtained from the Horizon Europe programme and also from the PRTR (Recovery, Transformation and Resilience Plan) funds.

Universitat de Lleida

COMMITMENT TO SOCIETY, CULTURE, EQUALITY AND COOPERATION

The university's two missions — the generation and transmission of knowledge — make sense insofar as these activities contribute to the development of the societies they serve and the people who make them up. The value of universities is directly proportional to their contribution to the progress of society and the well-being of people. Its mission also involves guaranteeing equality, improving employability, promoting health, catering for diversity, being committed to environmental sustainability, contributing to the economic development of the region and promoting culture and internationalization, giving meaning to the two principles.

The UdL makes a remarkable effort in this sphere. It allocates almost €440,000 of its budget to promoting equal opportunities for its students, especially those in an economic, family or personal situation which affects their training process. Notable results are likewise obtained from the rest of the actions undertaken.

As regards results, it is worth noting that for every €100 of funding received from the Generalitat of Catalonia, the UdL generates €301 of integrated social value and that it has more than 5,000 m² of active roofs in operation, generating 100% clean energy.

Investment €225.000

€2 million obtained from the Next Generation EU fund for energy efficiency actions.

Commitment to society, culture, equality and cooperation

Connection between the research projects and the SDG (*)

Maintain the university's commitment to the sustainable development goals

Source: own compilation starting from projects in force in 2021, with information from the lead researchers.
A project can have an impact on one or more SDGs.

By means of the research projects carried out by the researchers, the University contributes to attainment of the Sustainable Development Goals (SDG), mainly those related to health and well-being of people, the preservation of the planet's ecosystems and the competitiveness of the territory. Especially noteworthy is the impact on SDG 13 Climate Action (53), 12 Responsible Consumption and Production (52) and SDG 2 Zero Hunger (50).

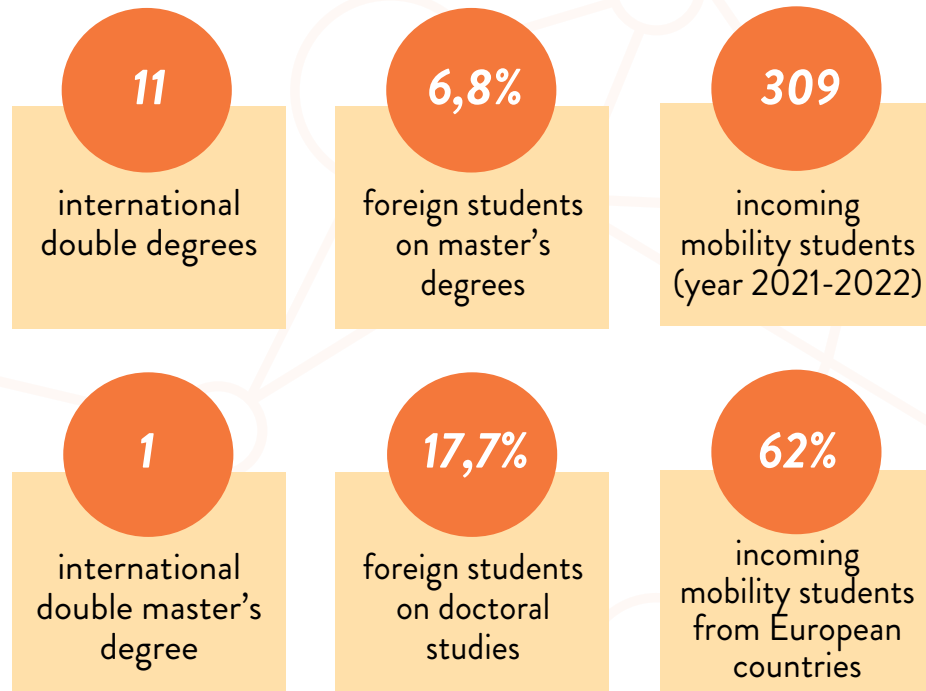

2030 Agenda at the UdL

- ✓ Electric power from 100% renewable sources
- ✓ Deployment of photovoltaic panels for self-consumption, with an active surface of 5.569 m²
- ✓ Grants for international cooperation, supportive mobility and research on fourth world projects
- ✓ Participation in the UdL Shelter Programme, to accommodate people from countries in conflict to restart studies in Catalonia
